

## **Pharmacology**

Pharmacology is the science of medicines and their effects on our bodies.

Pharmacologists research and develop new medicines, improve our understanding of how medicines work, and make sure they are used effectively and safely for everyone.

## **Pharmacy**

Pharmacy is the science and technique of preparing and dispensing the drugs that have been developed and researched by pharmacologists.

You might see pharmacists working at your local pharmacy, doctor's surgery, or hospital. They can give out medicines and share advice to keep you healthy.
