Your path to becoming a scientific explorer

If you enjoy learning about medicines, you could become a scientific explorer! Scientific explorers who study or work with medicines are called "pharmacologists".

On your journey through secondary school and beyond, you will learn more about biology and chemistry. This will help you start to understand how medicines work.

You will gain lots of experience on your way to becoming a pharmacologist. You might learn from experts at university, or through hands on experience.

There are lots of different jobs in pharmacology that you can do. You can discover new medicines, find out more about how they work, make sure that medicines are safe, or give advice on how medicines are used in hospital.
