

LEARNED SOCIETY PARTNERSHIP ON ANTIMICROBIAL RESISTANCE

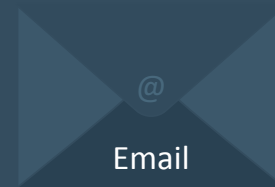

A partnership of seven learned societies representing tens of thousands of members of the scientific community, raising awareness of antimicrobial resistance, and supporting UK research to tackle this global challenge.

THE LEARNED SOCIETY PARTNERSHIP ON ANTIMICROBIAL RESISTANCE (LeSPAR)...

- Supports researchers to create, share and apply knowledge.
- Organises focused events to enable networking and knowledge exchange, and to promote effective collaborations across disciplines and sectors.
- Engages with government and other funders to achieve policy and funding support for the antimicrobial research community and connects expertise from our membership to policy makers.
- Assembles information on relevant resources and meetings.

LeSPAR engages widely with individuals and organisations across science, industry, policy, health care and the wider public.
